

# MONEY - DAY 4

L.O: I am able to use the four operations to solve money word problems

# Success Criteria

- ✓ I can use pictorial representations, like number lines and bar models, and mental strategies to use the four operations to solve money word problems.
- ✓ I can explain my reasoning when using the four operations to solve money word problems.

# Starter

Solve the word problems below.

Ruth has been saving money.  
She saved £9 last week and has saved  
another £3 this week.  
How much has she saved in total?

Jamal left the house with £19.  
He spent £7 on lunch.  
How much money does he have left after  
buying lunch?

What's the same? What's different?  
Explain your answer.

# Answer...

Solve the word problems below.

Ruth has been saving money.  
She saved £9 last week and has saved  
another £3 this week.  
How much has she saved in total?

Jamal left the house with £19.  
He spent £7 on lunch.  
How much money does he have left after  
buying lunch?

**What's the same? What's different?  
Explain your answer.**

The results to both calculations is £12. However, Ruth's calculation is addition ( $£9 + £3 = £12$ ), whereas Jamal's is a subtraction calculation ( $£19 - £7 = £12$ ).

Use the bar model provided to solve the word problem below.

Ruth buys a pizza for £11 and spends £3 on an orange juice.  
How much does she spend in total?

## Answer...

Ruth buys a pizza for £11 and spends £3 on an orange juice.  
How much does she spend in total?

<b><u>£14</u></b>	
£11	£3

Use the bar model provided to solve the word problem below.

Jamal buys a burger for £9 and spends £6 on a milkshake.  
How much does he spend in total?

## Answer...

Jamal buys a burger for £9 and spends £6 on a milkshake.  
How much does he spend in total?

<b><u>£15</u></b>	
£9	£6

Use the bar model provided to solve the word problem below.

Yasmin buys a sandwich for £8 and spends £5 on a bowl of soup.

How much does she spend in total?

# Answer...

Yasmin buys a sandwich for £8 and spends £5 on a bowl of soup.

How much does she spend in total?

<b><u>£13</u></b>	
£8	£5

Use the bar model provided to solve the word problem below.

Jamal has £15. He spends £4 on a ticket to watch a movie.  
How much money does he have left?

## Answer...

Jamal has £15. He spends £4 on a ticket to watch a movie.  
How much money does he have left?

£15	
<u>£11</u>	£4

Use the bar model provided to solve the word problem below.

Yasmin has £14. She spends £11 on a new pair of sandals.  
How much money does she have left?

## Answer...

Yasmin has £14. She spends £11 on a new pair of sandals.  
How much money does she have left?

£14	
<u>£3</u>	£11

Use the bar model provided to solve the word problem below.

Chen has £17. He spends £9 on a board game.  
How much money does he have left?

## Answer...

Chen has £17. He spends £9 on a board game.  
How much money does he have left?

£17	
<u>£8</u>	£9

Use the bar model provided to solve the word problem below.

James buys five tickets for a football game for £10 each.  
How much does he spend in total?

## Answer...

James buys five tickets for a football game for £10 each.  
How much does he spend in total?

<b><u>£50</u></b>				
£10	£10	£10	£10	£10

Use the bar model provided to solve the word problem below.

Ruth sells three cakes for £11 each.

How much money does she make in sales in total?

## Answer...

Ruth sells three cakes for £11 each.

How much money does she make in sales in total?

<b><u>£33</u></b>		
£11	£11	£11

Use the bar model provided to solve the word problem below.

Ahmed shares £44 equally between himself and his three brothers.

How much money do each of the boys get to keep?

# Answer...

Ahmed shares £44 equally between himself and his three brothers.

How much money do each of the boys get to keep?

£44			
<u>£11</u>	<u>£11</u>	<u>£11</u>	<u>£11</u>

Use the bar model provided to solve the word problem below.

Eve shares £36 equally between herself and her two sisters.  
How much money do each of the girls get to keep?

## Answer...

Eve shares £36 equally between herself and her two sisters.  
How much money do each of the girls get to keep?

£36		
<u>£12</u>	<u>£12</u>	<u>£12</u>

# Activity

Ruth says, “To calculate £14.70 and £43.50, I start by adding the pound amounts together, making a sub-total of £57. I then add together the pence amount together, making a sub-total of £1.20. I then add the two sub-totals together to make the total amount, which is £58.20.”

**Use Ruth’s strategy to solve:**

a)  $£23.90 + £21.20 =$

b)  $£36.40 + £22.90 =$

c)  $£35.85 + £42.90 =$

## Answer...

Ruth says, “To calculate £14.70 and £43.50, I start by adding the pound amounts together, making a sub-total of £57. I then add together the pence amount together, making a sub-total of £1.20. I then add the two sub-totals together to make the total amount, which is £58.20.”

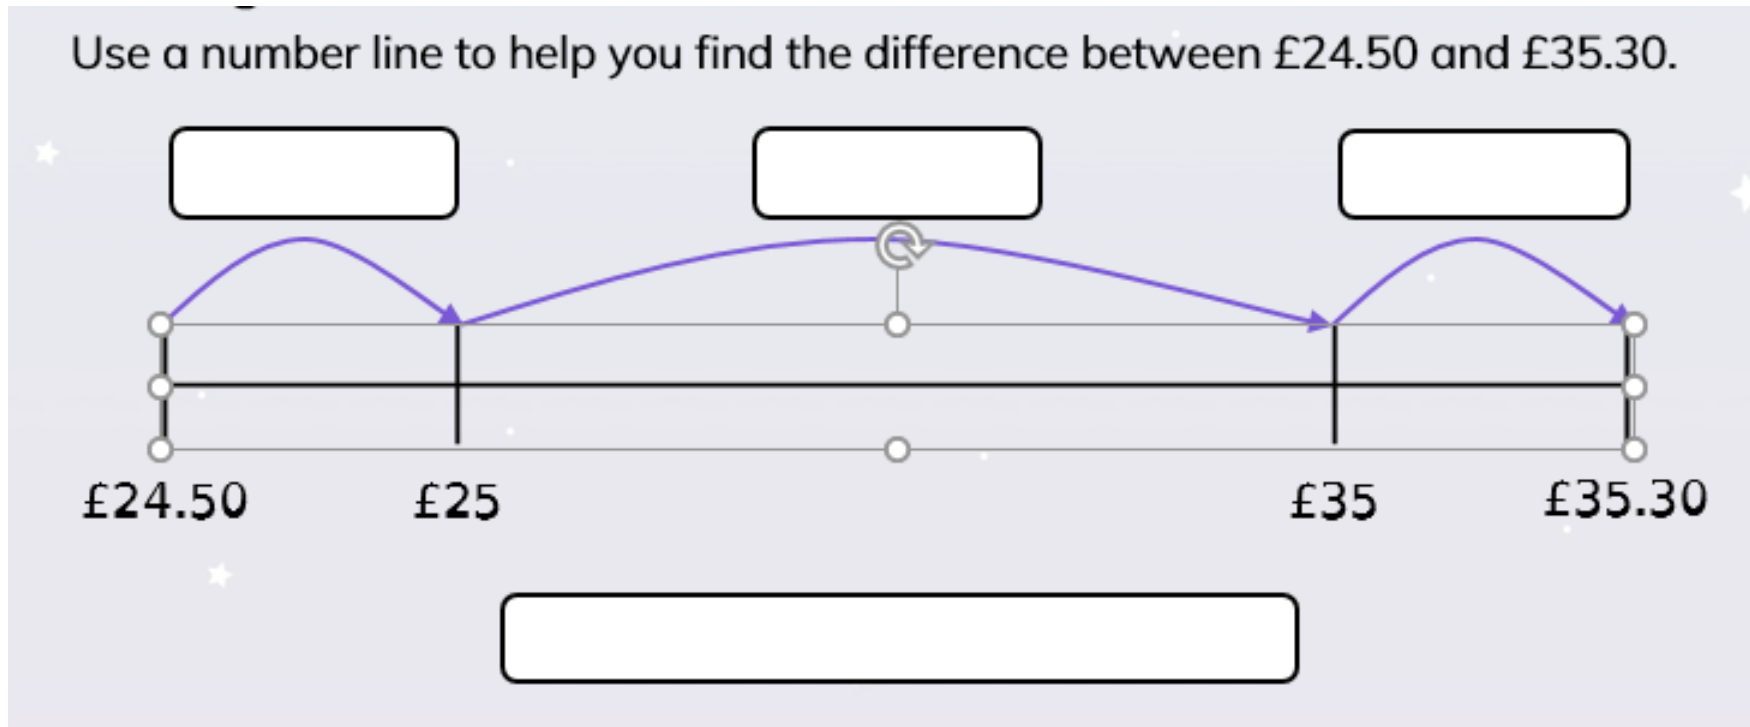

Use Ruth’s strategy to solve:

a)  $£23.90 + £21.20 = \underline{£45.10}$

b)  $£36.40 + £22.90 = \underline{£59.30}$

c)  $£35.85 + £42.90 = \underline{£78.75}$

Use a number line to help you find the difference between £24.50 and £35.30.

# Answer...

Use a number line to help you find the difference between £24.50 and £35.30.

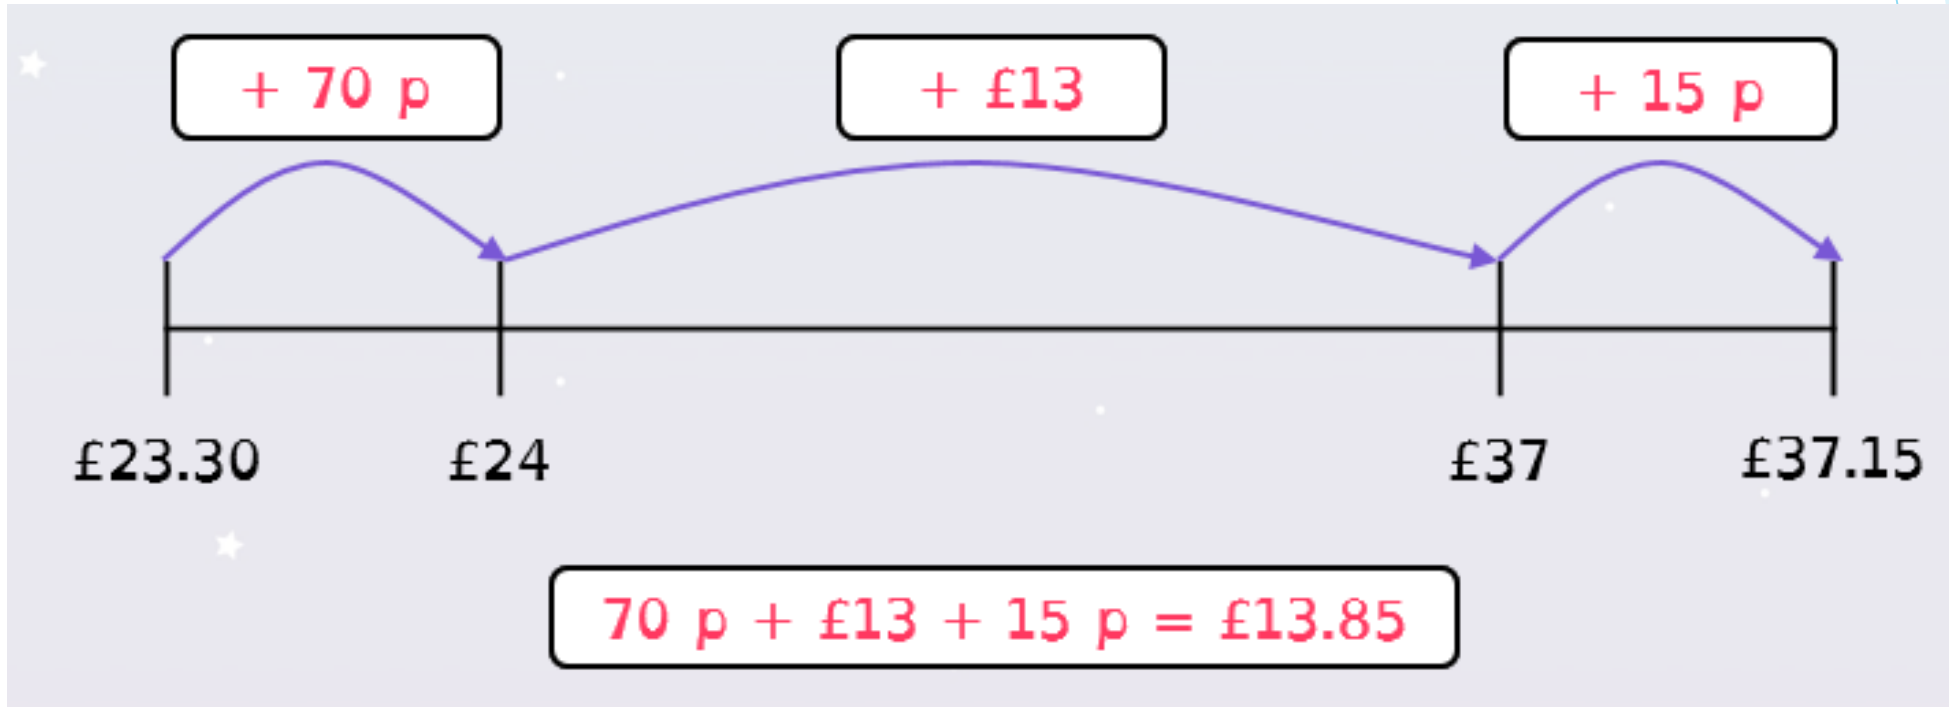

$$50 \text{ p} + \text{£}10 + 30 \text{ p} = \text{£}10.80$$

Use a number line to help you find the difference between £23.30 and £37.15.

Answer...

# Activity

A sporting goods website sells the following items:

Jamal buys a basketball net, some shoes and a basketball jersey.

He pays with a £50 note.

**How much change does he get back? Explain your answer.**

# Answer...

A sporting goods website sells the following items:

Jamal buys a basketball net, some shoes and a basketball jersey.

He pays with a £50 note.

How much change does he get back? Explain your answer.

He spends  $£24.99 + £9.20 + £4.50 = £38.69$ .

So, he gets  $£50 - £38.69 = \underline{£11.31}$  back in change.

# Activity

A sporting goods website sells the following items:

Ruth buys four basketball nets and uses a £5 off voucher.

How much money does she need to spend to pay the rest of the balance?

Explain your answer.

# Answer...

A sporting goods website sells the following items:

Ruth buys four basketball nets and uses a £5 off voucher.

How much money does she need to spend to pay the rest of the balance?

$$4 \times £6.40 = £25.60$$

$$£25.60 - £5 = \underline{£20.60}$$

# Evaluation

To find the difference between the price of a small pot of honey, £4.89 and a large pot of honey, £11.35, I add them together.

Do you agree?  
Explain your answer.

# Answer...

To find the difference between the price of a small pot of honey, £4.89 and a large pot of honey, £11.35, I add them together.

Do you agree?  
Explain your answer.

**No, I do not agree.**

Astrobee will find out the combined price of a small pot and a large pot of honey. Astrobee needs to subtract or find the difference (£6.46).
